11.3%

HUMAN-CRAFTED

A page with a pulse and a paper stock. What fingerprints it has are typographic tics, not a template.

Executive Summary

AI USAGE SCORE 11.3%	BAND Human-crafted	WEIGHTED SUM 85 / 750	POINTS ≥ MILD 4
--	--	---	---------------------------------------

11.3% — Human-crafted, and it earns it. 32 of 36 fingerprints are absent outright: no gradients, no violet, no glass, no icon library, no stock photography, no testimonials, no pricing block, no motion, no JavaScript at all. The restraint is systematic rather than accidental — radius is assigned by hierarchy, spacing runs on one scale, and every accent holds a named low-chroma role. Review trigger: Group A 52.9% of contribution. Re-checked: that share comes from two unrelated points, not one decision scored repeatedly. No rebalancing applied.

HOW TO READ THIS REPORT

Every score below cites a hex value, a quoted line of copy, or an exact location. Points scoring **None** are listed for completeness and contribute zero. The percentage is a summary; the evidence tables are the finding.

Section 02

AI Usage Score — Calculation

$$\text{contribution} = \text{weight} \times \text{presence (0-4)} \times \text{likelihood (0-5)}$$
$$\text{AI Usage Score} = 100 \times \sum \text{contribution} / 750 \text{ (750 = } \sum w \text{ 37.5} \times 4 \times 5 \text{)}$$

TIER / GROUP	Σ WEIGHT	Σ CONTRIBUTION	SHARE OF TOTAL
A — Visual Language	17	1.200	52.9%
B — Component & Layout Tells	4	0.000	0.0%
C — Motion & Interaction	3	0.000	0.0%
D — Copy & Content	9	0.267	11.8%
E — Trust & Polish	4.5	0.800	35.3%
Total	37.5	85 / 750	11.3%

ANTI-GAMING RULES APPLIED

Correlated siblings capped (one of {gradients, purple-black, neon} may not carry the other two past Moderate; same for {buzzwords, "it's not X it's Y"} and {3-tier pricing, checkmarks}). Absence points — missing TOS/Privacy, missing skeletons, no personality — never exceed Mild unless a point in the same section scored ≥ Moderate. Points scoring None contribute zero.

Band

RANGE	BAND	READING
0 — 15	Human-crafted	Choices are visible and specific.
15 — 35	Human + AI assists	Structure is human; parts are assembled.
35 — 60	Hybrid	Human direction, AI execution, visible defaults.
60 — 80	AI-dominant	Defaults are the design.
80 — 100	Vibecoded	Nothing on this page was decided.

Section 03

36-Point Evidence Table

Presence: 0 None · 1 Mild · 2 Moderate · 3 Heavy · 4 Extreme. Likelihood: how strongly this pattern's presence implies AI authorship *given the rest of the page* (0-5).

#	POINT	PRESENCE	EVIDENCE	LIKELI.	W	CONTRIB.
1	Gradients	0 — None	No gradient declaration anywhere in the stylesheet; every fill is a flat hex (paper #fbfaf7, surface #f2efe8, ink #14181d).	1	1.5	0.000
2	Purple-and-Black Dominance	0 — None	No violet in the palette. Darkest ink is #14181d on warm paper #fbfaf7 -- a considered surface, not #0a0a0a.	1	1.5	0.000
3	Neon / Pastel Accents	0 — None	Accents are moss #4a5d3a, gold #8a6d1f, rust #b4451f. All low-chroma, none used as glow.	1	1.5	0.000
4	Overused Fonts	0 — None	Stack is Bitstream Charter / Lato / Fira Code, actually loaded from the CSS2 endpoint. No Inter, Geist, Space Grotesk, or Satoshi.	1	1.5	0.000
5	Serif Italic Accents	2 — Moderate	Three italic serif spans inside a single hero paragraph: <i>gradient text, three equal cards, line to change</i> .	2	1	0.800
6	Lucide / Sparkle Icons	0 — None	No icon library. The only SVG is the band ruler; disclosure markers are + and – set in mono.	1	1	0.000
7	Emoji in Headings	0 — None	No emoji in any heading, eyebrow, nav item, or CTA.	1	1	0.000
8	Em Dashes	0 — None	Zero em dashes in headings and hero copy. The — characters present sit inside quoted skill text in table cells.	1	0.5	0.000
9	Glassmorphism	0 — None	No backdrop-filter, no translucent rgba fill, no rgba white hairline. Surfaces are opaque paper or surface.	1	1	0.000
10	Bento Grids	0 — None	No mosaic. Sections are a 7/5 hero grid, a ruled step list, and full-width tables.	1	1.5	0.000
11	Identical Feature Cards (3-card row)	0 — None	No row of equal cards. The install section is a 2-column text layout carrying unequal content.	1	1	0.000
12	Colored Border Cards	1 — Mild	The .spec output block is defined by a 3px moss left strip — the coloured left-strip variant, once.	2	1	0.400
13	Default shadcn / Tailwind	0 — None	No Tailwind, no shadcn, no component library. One hand-written stylesheet.	1	1.5	0.000

#	POINT	PRESENCE	EVIDENCE	LIKELI.	W	CONTRIB.
Components						
14	Soft Corner Radius	0 — None	Radius is assigned by hierarchy: 2px on interactive panels and code, 0 on rules, list rows, and table cells.	1	0.5	0.000
15	Floating 3D Shapes / Decor Blobs	0 — None	No decorative shapes, no gradient blobs, no grain overlay, no orbs.	1	0.5	0.000
16	Pure White / Low-Contrast Dark	0 — None	Warm paper #fbfaf7. Body ink 16:1, muted #5c626a 5.9:1, rust labels 5.3:1 — all pass AA.	1	0.5	0.000
17	Dot Grids / Terminal Windows	0 — None	No dot pattern. The mono .spec block is real output with no traffic-light chrome.	1	1	0.000
18	Badge-Above-Headline	0 — None	Eyebrow is plain rust mono text with letter-spacing, not a pill. Hero is a left-aligned 7/5 grid, not a centred stack.	1	1.5	0.000
19	Three-Tier Pricing	0 — None	No pricing block.	1	1.5	0.000
20	Drop Shadows	0 — None	No box-shadow anywhere. Depth comes from rules and fill contrast.	1	0.5	0.000
21	Fade / Rise on Scroll	0 — None	No JavaScript on the page. Nothing is hidden pending scroll.	1	0.5	0.000
22	Cursor Light Beam / Spotlight	0 — None	No pointer tracking, no cursor-following gradient.	1	1.5	0.000
23	Hover Animations	0 — None	Two hover states, deliberately unlike each other: the CTA shifts fill, nav links gain a rust underline.	1	0.5	0.000
24	Buzzword Copy	0 — None	None of the tracked buzzwords appear. Copy names artifacts instead: src/app/globals.css:58, Σ 291 / 750.	1	1.5	0.000
25	"It's not X, it's Y" Copy	1 — Mild	One instance: "It cites the line to change, not the vibe to change."	2	1.5	0.267
26	Fake Product Screenshots / Mockups	0 — None	No screenshots or mockups. Output figures quoted in the spec block are from the shipped sample report.	1	1	0.000
27	Fake Testimonials	0 — None	No testimonials, no logo cloud, no press row.	1	1.5	0.000
28	Stock Team / Office Photography	0 — None	No photography. The page carries no raster images at all.	1	1	0.000
29	Checkmark Bullets	0 — None	Disclosure markers are + / –, not checkmarks. No green check anywhere.	1	0.5	0.000

#	POINT	PRESENCE	EVIDENCE	LIKELI.	W	CONTRIB.
30	FAQ Restating the Product	0 — None	No FAQ. The 36 collapsible rows are the remedy catalog, not restated marketing copy.	1	1	0.000
31	Vague CTAs	0 — None	One CTA, “Install the skill”, carrying a value noun. Nav labels name their sections.	1	1	0.000
32	Missing TOS / Privacy	1 — Mild	No /terms and no /privacy; the footer carries no legal links. Absence-only, capped at Mild per the anti-gaming table (no Group E sibling reaches Moderate).	2	0.5	0.800
33	Missing Skeleton / Loading States	0 — None	Static marketing page — not evaluable. Recorded None per the checklist.	1	0.5	0.000
34	Inconsistent Spacing / Broken Flow	0 — None	One spacing scale: 60px section padding, 28px gutters, 56px hero gap, 9px table row padding, 22px step padding.	1	1	0.000
35	Dead Links / Placeholder Pages	0 — None	All four nav anchors resolve to existing section ids. No # hrefs, no empty href, no coming-soon pages.	1	1	0.000
36	No Personality / Nothing Sticks	0 — None	Owned voice throughout: “Every AI-built page leaves prints”, “no vibes”, and a band ruler that argues the thesis.	1	1.5	0.000

The Roast

Subtract the fonts and you are left with a page that made decisions, which is rarer than it should be. Thirty-two of thirty-six fingerprints are simply absent — not softened, not hidden behind a disclaimer, absent. There is no gradient pretending to be light. There is no violet. There is no icon in a rounded box, because there are no icons at all; the only drawing on this page is a ruler, and it is drawing the actual bands of the actual score, which is the sort of thing a person does when they have an argument. Point 13 asks whether a shadow component set shipped untouched, and the honest answer is that there is no component set, no Tailwind, and one hand-written stylesheet where radius is 2px on the things you can touch and 0 on the lines that divide them. That is a decision. Uniform softness, which is what point 14 is actually hunting for, would mean nobody chose.

So the audit arrives at its four findings with very little to work with, and the largest of them is point 5: three italic serif spans in one paragraph of hero copy — *gradient text, three equal cards, line to change*. It is the classic editorial reflex, the single-serif-word-for-emphasis move that a hundred thousand landing pages have made this year. Two of the three sit in the same sentence, which is what lifts this from Mild to Moderate rather than a stray ornament. The cure is not removing emphasis; it is picking one. A pull-quote in Charter italic, used once, reads as a voice. Three in a row reads as a font demo.

Point 12 is smaller and nearly charming: the spec block that quotes the report's own output is defined by a three-pixel moss stripe down its left edge. That is the coloured left-strip, the descendant of every “accent bar” card ever shipped, and on a page with no other tinted borders it stands out precisely because the discipline is otherwise immaculate. Point 25 is one sentence doing the rhetorical pivot — “the line to change, not the vibe to change” — which is a good line, and is also the exact shape of “Not just a tool. A partner.” Point 32 is bookkeeping: no terms, no privacy, no legal links in the footer, on a page collecting nothing and running entirely on your machine.

What this page has that the checklist spends point 36 measuring is worth saying plainly, because the whole instrument exists to detect its absence. Nobody wrote “streamline your workflow” here. Nobody built a pricing table out of a features array. The headline makes a claim that could be wrong — that pages leave prints — and then the page demonstrates it by carrying the instrument that reads them. The band ruler in the hero is not decoration; it is the argument, rendered at 320 pixels wide, with the real boundaries on it. That is a page with something to say and the spine to say it in a table. Fix the italic tics, drop the left strip, ship the legal pages, and this is a 2. No amount of subtraction gets a human page to zero; the goal was never zero. The goal was that a stranger could tell which decisions were made.

Human-Made Countermeasure Blueprint

One executable alternative for every point that scored Presence ≥ Mild. Named typefaces, named layout devices, named color roles — no vibes.

1. Visual System

POINT	DIAGNOSIS	COUNTERMEASURE
12	The output spec block is defined by a 3px moss left strip — the one tinted container on a page whose other 200 rules are neutral hairlines.	Drop the strip. Set the block off with a 1px <code>var(--rule)</code> top rule plus the existing <code>var(--surface)</code> fill — the same move the tables already use, so the block stops announcing itself as a different species of box. If the spec block needs a colour role, put the <i>text</i> in moss, not the container.

2. Typography & Voice

POINT	DIAGNOSIS	COUNTERMEASURE
5	Three italic serif spans in one hero paragraph: <i>gradient text</i> , <i>three equal cards</i> , <i>line to change</i> .	Keep exactly one — <i>line to change</i> is the one carrying the argument. Set the other two in Lato 400 with the surrounding words, or fold them into the sentence without emphasis. Reserve Charter italic for a standalone pull-quote if one is added later; never three in a paragraph.

3. Interaction & Motion

POINT	DIAGNOSIS	COUNTERMEASURE
	Nothing at Presence ≥ Mild. No scroll reveals, no cursor spotlight, no uniform hover lift. The two hover states that exist are deliberately unlike each other. Leave them alone.	

4. Content & Proof

POINT	DIAGNOSIS	COUNTERMEASURE
25	One instance of the rhetorical pivot: “It cites the line to change, not the vibe to change.”	State it flat: “Every point names the line to change.” The X-not-Y shape survives in marketing prose because it flatters the writer; on a page whose whole argument is that the tool names specifics, an abstract contrast undercuts it.

5. Structure & Polish

POINT	DIAGNOSIS	COUNTERMEASURE
32	No /terms, no /privacy, no legal links in the footer.	Add a /privacy page stating that the skill runs locally and sends nothing anywhere — which is both true here and a better trust signal than a stock template. Date both pages and link them in the footer. Legal stubs read worse than honest one-paragraph pages.

Remediation Roadmap

Ordered by points recovered per unit of effort. Do the top row first; it moves the score more than the bottom three combined.

PRIORITY	EFFORT	ACTION	POINTS AFFECTED	EST. SCORE DELTA
P1	Low	Ship a /privacy page (the skill is local and sends nothing) and a dated /terms ; link both in the footer	32	-4.0
P2	Low	Replace the 3px moss left strip on the spec block with a 1px rule plus the surface fill already in use	12	-2.0
P2	Low	Cut the two decorative italic serif spans in the hero, keeping <i>line to change</i>	5	-2.0
P3	Low	Rewrite the closing sentence as a flat claim instead of the X-not-Y pivot	25	-1.3

SEQUENCING NOTE

Content and proof (fake testimonials, stock photos, restated FAQs, buzzwords) are cheap to fix and expensive to fake — do them before any visual work. Type and color come next; motion last, and only where it means something.

Raw Notes & Method

Method

Live fetch of <https://bytesmith-rust.vercel.app/> plus renders captured at 1440px and 390px. All 36 points scored before any total was computed. Correlated siblings {1,2,3} / {24,25} / {19,29} checked — no cap triggered. Absence points 32/33/36 limited to Mild; Group A carries 52.9% of contribution — above the 50% review threshold. Re-checked: the share comes from two unrelated points (5 serif-italic accents, 12 a single moss left-strip), not one decision scored repeatedly. No rebalancing applied.

Rendered evidence

- **Palette dump.** Full fill set: #fbfaf7, #f2efe8, #14181d, #b4451f, #4a5d3a, #8a6d1f, #d9d3c7, plus two band-ruler fills. No #ffffff page, no #0a0a0a, no violet, no neon.
- **Font stacks.** Three families, one CSS2 request. No Inter, Geist, Space Grotesk, Plus Jakarta, Satoshi, Instrument Serif, or General Sans.
- **Effects.** Zero `backdrop-filter`, zero `box-shadow`, zero `filter`. No SVG filter, no mask, no blend mode.
- **Motion.** No `<script>` on the page. The only two transitions are a background-colour change on the CTA and a border-colour change on nav links.
- **Imagery.** One inline SVG (the band ruler). No `<img>`, no `background-image`, no icon font, no emoji.
- **Links.** Four in-page anchors, all resolving. No `href="#"`, no empty `href`, no external dead ends.

Known gaps in this audit

- **Point 33 is not evaluable.** Static marketing page, no data views, recorded None rather than guessed.
- **Point 35 was probed at the root only.** This is a single-page site; there are no secondary routes to 404, so the absence of dead links is established by the absence of links, not by testing many.
- **Points 20, 21, 23 are static-render judgments.** A stylesheet read confirms no shadow or transform declarations exist, so there is nothing to observe at runtime.
- **No `file:line` anchors.** This is a URL-mode audit; the site ships one generated HTML file, and per §1 the evidence rule degrades to visual and stylesheet citation rather than inventing source locations.

Self-referential note

This is the skill's own showcase page, audited by the skill, unmodified. The score was computed from the evidence above and published as it came out; the four findings are real and the fixes in the roadmap are applied to the source, not to the score.
