HUMAN-CRAFTED

A page that made decisions. What prints remain are a tic, a dash habit, a quoted word, and a favicon that 404s.

# Executive Summary

|                                           |                                          |                                            |                                       |
|-------------------------------------------|------------------------------------------|--------------------------------------------|---------------------------------------|
| <div>AI USAGE SCORE</div> <div>0.5%</div> | <div>BAND</div> <div>Human-crafted</div> | <div>WEIGHTED SUM</div> <div>4 / 750</div> | <div>POINTS ≥ MILD</div> <div>4</div> |
|-------------------------------------------|------------------------------------------|--------------------------------------------|---------------------------------------|

0.5% — Human-crafted, and it earns it. Audit unit: the live home page plus a 20-URL crawl, fetched 2026-09-27. Thirty-two of thirty-six fingerprints are absent outright: no gradients, no violet, no glass, no icon library, no stock, no testimonials, no pricing, no motion, no JavaScript. The four prints that remain are small and specific — one italic span in the lede (P5), five dashed eyebrows (P8), the word supercharge quoted twice inside point 24's own rule text (P24), and a favicon that 404s (P35). No review trigger: Groups A and D tie at 37.5% each, under the 50% threshold. This report supersedes the 2026-09-26 audit, whose cover printed  $\Sigma = 85$  while its rows summed 2.267.

HOW TO READ THIS REPORT

Every score below cites a hex value, a quoted line of copy, or an exact location. Points scoring **None** are listed for completeness and contribute zero. The percentage is a summary; the evidence tables are the finding.

Section 02

# AI Usage Score — Calculation

$$\text{contribution} = \text{weight} \times \text{presence (0-4)} \times \text{likelihood (0-5)}$$
$$\text{AI Usage Score} = 100 \times \Sigma \text{contribution} / 750 \text{ (750 = } \Sigma w \text{ 37.5} \times 4 \times 5 \text{)}$$

| TIER / GROUP                 | Σ WEIGHT | Σ CONTRIBUTION | SHARE OF TOTAL |
|------------------------------|----------|----------------|----------------|
| A — Visual Language          | 17       | 1.500          | 37.5%          |
| B — Component & Layout Tells | 4        | 0.000          | 0.0%           |
| C — Motion & Interaction     | 3        | 0.000          | 0.0%           |
| D — Copy & Content           | 9        | 1.500          | 37.5%          |
| E — Trust & Polish           | 4.5      | 1.000          | 25.0%          |
| Total                        | 37.5     | 4 / 750        | 0.5%           |

ANTI-GAMING RULES APPLIED

Correlated siblings capped (one of {gradients, purple-black, neon} may not carry the other two past Moderate; same for {buzzwords, "it's not X it's Y"} and {3-tier pricing, checkmarks}). Absence points — missing TOS/Privacy, missing skeletons, no personality — never exceed Mild unless a point in the same section scored ≥ Moderate. Points scoring None contribute zero.

## Band

| RANGE    | BAND               | READING                                          |
|----------|--------------------|--------------------------------------------------|
| 0 — 15   | Human-crafted      | Choices are visible and specific.                |
| 15 — 35  | Human + AI assists | Structure is human; parts are assembled.         |
| 35 — 60  | Hybrid             | Human direction, AI execution, visible defaults. |
| 60 — 80  | AI-dominant        | Defaults are the design.                         |
| 80 — 100 | Vibecoded          | Nothing on this page was decided.                |

## Section 03

# 36-Point Evidence Table

Presence: 0 None · 1 Mild · 2 Moderate · 3 Heavy · 4 Extreme. Likelihood: how strongly this pattern's presence implies AI authorship *given the rest of the page* (0-5).

| #  | POINT                 | PRESENCE | EVIDENCE                                                                                                                                     | LIKELI. | W   | CONTRIB. |

# The Roast

---

**S**ubtract what the checklist proves absent and there is almost nothing left to prosecute. Thirty-two of thirty-six fingerprints are outright missing: no gradients, no violet, no neon, no glass, no icon library, no stock photography, no testimonials, no pricing block, no drop shadows, no JavaScript. Nothing fades in on scroll because nothing waits for scroll. What the page has instead is one type pairing, one spacing rhythm, and radius assigned by hierarchy — 2px where a hand touches, 0 where rules divide. That is a design, not a default.

The largest finding of this run is the report it replaces. The 2026-09-26 audit printed  $\Sigma = 85$  on its cover while its own evidence rows summed 2.267, cited a file — `src/app/globals.css:58` — that does not exist in this repository, and invoked `SKILL.md:15`, the rule requiring a report not commit the crimes it prosecutes, while breaking the arithmetic the scoring math mandates. Three of its four findings have since been repaired in the source rather than the score: the tinted left strip is gone, the rhetorical pivot sentence is gone, and `/terms` and `/privacy` now return 200, so points 12, 25, and 32 all read zero.

Four prints remain, each small and specific. Point 5 is one italic serif span in the lede at `build.py:1055`; the hero headline carries no emphasis at all, where the earlier pass found three spans and called it Moderate. One italic word in a paragraph is a beat; three were a font demo. The direction is the checklist's own: italic serif as a system — pull-quote, section number, aside — or not at all.

Point 8 survives entirely in the section eyebrows: all five read '01 — How it runs' in dashed mono caps at `build.py:1073`, while headings and hero prose carry zero em dashes. The tic lives in the numbering, not the voice. Count them, as the antidote says; five of five is a habit, not an accident.

Point 24 is the irony the score cannot decline. supercharge appears twice on the page, at `live.html:541` and `live.html:607`, and both times inside the quoted rule text of `countermeasures.md:34` — the very line that orders the word deleted. A page that prosecutes a buzzword by printing it still printed it: presence Mild, likelihood 1, contribution 1.500, the largest row on the sheet.

Point 35 is one confession: no link rel icon in the head at `build.py:1021`, so `/favicon.ico` returns 404 while every other target in the 20-URL crawl returns 200. Everything the page promises resolves except its own coat of arms. Crawl every href, the antidote says; a 404 is a confession.

Which leaves point 36 at zero, and that zero is the argument: docket voice, bespoke SVG schematics, cite rails that resolve to real lines, a band ruler that draws the actual score. A stranger can tell which decisions were made here. Nothing is left to prosecute beyond four small edits, and the score that follows them will be lower for it — which was always the point.

# Human-Made Countermeasure Blueprint

One executable alternative for every point that scored Presence ≥ Mild. Named typefaces, named layout devices, named color roles — no vibes.

## 1. Visual System

| POINT | DIAGNOSIS | COUNTERMEASURE                                                                                                                                                      |
|-------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       |           | Nothing at Presence ≥ Mild. Flat hex fills from one palette, radius assigned by hierarchy, zero box-shadows and zero tinted borders. Leave the visual system alone. |

## 2. Typography & Voice

| POINT | DIAGNOSIS                                                                                                                                                                                        | COUNTERMEASURE                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5     | One italic serif span sitewide, in the lede at <code>site/build.py:1055</code> ; the hero headline carries zero emphasis (down from three spans in the prior run).                               | Use italic serif as a <i>system</i> — pull-quotes, section numbers, footnote asides — or not at all. One decorative span mid-paragraph is a tic; either promote it to a recurring role or delete it.                                                        |
| 8     | All five section eyebrows set as <code>01 — How it runs (site/build.py:1073)</code> ; headings and hero prose carry zero em dashes, so the habit lives only in the numbering.                    | Vary the eyebrows' punctuation: colon, period, or a short full sentence. Count the dashes in headings; if every section number uses one, cut to at most one per page.                                                                                       |
| 24    | <code>supercharge</code> ×2, both inside the page quoting point 24's own rule text ( <code>live.html:541</code> , <code>live.html:607</code> ; source line <code>countermeasures.md:34</code> ). | Delete every word on the checklist's buzzword list — including where it appears inside a quotation. If a rule must be cited, paraphrase it or replace the word with a placeholder, then force specificity: what the tool does, for whom, with which number. |

## 3. Interaction & Motion

| POINT | DIAGNOSIS | COUNTERMEASURE                                                                                                                                                                   |
|-------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       |           | Nothing at Presence ≥ Mild. No scroll reveals, no cursor spotlight, no uniform hover lift; the two hover states that exist are deliberately unlike each other. Leave them alone. |

## 4. Content & Proof

| POINT | DIAGNOSIS                                                                                                                                                                                                | COUNTERMEASURE |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
|       | Nothing at Presence ≥ Mild. No testimonials, no stock imagery, no invented logos; every claim on the page is a claim about this repository and carries a file or line citation. Leave the content alone. |                |

## 5. Structure & Polish

| POINT | DIAGNOSIS                                                                                                                                                                        | COUNTERMEASURE                                                                                                                                                                           |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35    | No <code>&lt;link rel="icon"&gt;</code> in the head ( <code>site/build.py:1021</code> ); <code>/favicon.ico</code> returns HTTP 404 while the other 19 crawl targets return 200. | Ship the favicon: add the <code>&lt;link rel="icon"&gt;</code> element, serve the file, and re-run the 20-URL crawl until every target returns 200. A 404 in the footer is a confession. |

# Remediation Roadmap

Ordered by points recovered per unit of effort. Do the top row first; it moves the score more than the bottom three combined.

| PRIORITY | EFFORT | ACTION                                                                                                                                                                               | POINTS<br>AFFECTED | EST. SCORE DELTA |
|----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------|
| P1       | Low    | Purge the quoted buzzwords: rewrite the point-24 example in <code>countermeasures.md:34</code> so the rule never prints <code>supercharge</code> itself, then rebuild the page copy. | 24                 | -1.5 $\Sigma$    |
| P2       | Low    | Delete the single italic span in the lede at <code>site/build.py:1055</code> , or promote italic serif to a real recurring role across the page.                                     | 5                  | -1.0 $\Sigma$    |
| P2       | Low    | Add <code>&lt;link rel="icon"&gt;</code> at <code>site/build.py:1021</code> and serve the favicon file so the crawl returns 200.                                                     | 35                 | -1.0 $\Sigma$    |
| P3       | Low    | Vary the five section eyebrows at <code>site/build.py:1073</code> : colon or period instead of the em dash.                                                                          | 8                  | -0.5 $\Sigma$    |

SEQUENCING NOTE

Content and proof (fake testimonials, stock photos, restated FAQs, buzzwords) are cheap to fix and expensive to fake — do them before any visual work. Type and color come next; motion last, and only where it means something.

# Raw Notes & Method

## Method

Single-page audit of the live home page at <https://bytesmith-rust.vercel.app/> fetched 2026-09-27, rendered at 1440×900 and 390×844, plus a crawl of all 20 href targets in its link set (all HTTP 200 except `/favicon.ico`). All 36 checklist points were scored before any total was computed; correlated siblings {1, 2, 3}, {19, 29}, and {24, 25} were checked and none triggered the no-cap review. Group shares: A 37.5%, B 0%, C 0%, D 37.5%, E 25.0% — no group exceeds 50%, so no review trigger fired. Absent rows record likelihood 0 (the prior report printed 1 on absent rows; contribution is 0.000 either way — noted here for transparency). Cites use `path:line` into this repository. Scoring math per `SKILL.md:79`:  $\text{contribution} = \text{weight} \times \text{presence}(0-4) \times \text{likelihood}(0-5)$ ,  $\Sigma$  over 750, one decimal. Checklist scope per `checklist.md:1`.

## Rendered evidence

- Palette: `#fbfaf7` paper, `#f2efe8` surface, `#14181d` ink, `#b4451f` accent, `#4a5d3a` / `#8a6d1f` status, `#d9d3c7` rules — flat hex only.
- Type: Charter + Lato + Fira Code; no display-font hero, no gradient text.
- Effects: 0 `box-shadow`, 0 `backdrop-filter`, 0 `@keyframes`, 0 `<script>`, 0 `<img>`.
- Crawl: 19/20 targets 200; `/favicon.ico` 404 (point 35).
- Five exhibit cite-rails resolve to `checklist.md:1`, `countermeasures.md:7`, `SKILL.md:15`, `SKILL.md:35`, `SKILL.md:79`, `README.md:18`.

## Known gaps in this audit

- Point 33 (content-specific signals) is not evaluable from a single crawl of one page family.
- Absent rows print likelihood 0; the prior report printed 1 — contribution identical, convention documented here.
- Point 24 counts appearances inside quoted rule text; the checklist scores the string as shipped, not as intended.
- Points 20, 21, and 23 are static-render judgments; no runtime behavior beyond CSS was exercised.
- The crawl covers 20 href targets from the home page, not the full origin surface.

## Self-referential note

This is the second audit of this page by its own tooling (per `SKILL.md:15`: the report must not commit the crimes it prosecutes). The 2026-09-26 report printed  $\Sigma = 85$  on its cover while its own rows summed 2.267, and cited a file, `src/app/globals.css:58`, that does not exist in this repository. Between runs the site was rebuilt: points 12, 25, and 32 moved to 0 (left-strip removed, pivot sentence rewritten, terms/privacy shipped), and point 5 dropped from Moderate to Mild as the italic accents were consolidated to one. This report supersedes the prior one; the prior file remains in version history for comparison.
